I'm looking for the types of changes I want to make to this photo and how best to apply them. I'd like to begin with correcting some tiny details in the sky, and that's where this program shines. - Lens Correction: It improves the appearance of the image by enhancing the brightness of the image. It also allows you to correct the red-eye problem, plus it corrects dust and other unwanted shades. In addition to this, it restores and removes Chromatic Aberrations, saturation, and sharpening. The tool allows you to delete or add to various levels of highlights, mid-tones, or shadows.
- Gradient Tools: There are two types of Gradient tool. They are gradient right tool that is used to create a gradient from the left to the right side, while the other one is gradient left tool that lets you create a gradient towards the left side. There are so many tools that are quite simple to use. You can easily use these tools to apply custom gradients to your images.
- Layer Panel: In Photoshop CC 2021, the Layer panel has been revamped. It allows you to see and edit the properties (like the colors, locations, and types) of all the layers as a whole.
