With Adobe's new Creative Cloud Photon subscription, everyone now has a new way to share their creations directly to the world without a digital camera. That means, you don't need one of those massive, expensive devices and forget about the load of physical reality you need to unload each time you want to update your photos. You can now, instead, instantly share a limited number of images (hundreds, not thousands) on all the new platforms on which you can now share your creations, from the web to your phone and even to a Mac. All of these features, unlocked by their new subscription to Creative Cloud or Creative Cloud for Essentials, are included in the free version of the new Photon service for the Creators subscription plan, the least expensive option and a big, central way to share your work with someone (or many people) around the world without paying up to $50 a month on a cloud subscription. You can explore the redesigned Elements workspace and still get the same results as the full Photoshop application. You can feasibly edit music videos, assemble YouTube videos, add titles and logos, animate characters, add effects, motion graphics, and more. The redesigned Elements workspace makes it easy to edit your footage and present it in full-screen mode. You can walk through your edits using a variety of built-in transitions, export your work to the web, create a DVD, or output to more than 20 device file formats. New tools by Adobe to provide a better 3D experience include the new Substance Design Suite, an all-new visual, 3D, surface and stylizing design app for the Mac and Windows. The goal with Substance Design Suite is to bring some of the agility and productivity expected from modern 2D design apps to 3D. Specifically, Photoshop and Lightroom integrations mean that you can now transfer Photoshop and Lightroom layers directly into the Design Suite app without having to worry about "breaking" a design, and then reapplying it. Adobe says that these tools are now rolled up in one big package on both Windows and macOS, they showcase both the creative workflows and tooling that are possible, and they provide a collection of components for artists and designers to take advantage of. The team also plans new Photoshop features to bring 3D capabilities to more people, whether they're just getting started or learning how to use 3D in their work.
